The ambient temperature range of special apparatus types is included in table 4.

<u>1G, 2G</u>	...-....-.Y1.-..... / S85	-25 °C ... +85 °C

<u>1G, 2G</u>	...-....-.Y1.-..... / S100	-25 °C ... +100 °C

Table 4. Exceptions for ambient temperature range.

The ambient temperature range for all other apparatus types is -25 °C ... +70 °C

For explosive gas atmospheres, the temperature class for different sensor models, depends on the following parameters: maximum ambient temperature, values of I_i and P_i . The temperature class can be determined from tables 2 and 5 to 8.

Technical Data

In type of protection intrinsic safety Ex ia IIC and Ex ia IIIC, only for connection to a certified intrinsically safe circuit. Maximum values:

$U_i = 20 \text{ V}$; I_i and P_i = see table 5 to 8; $C_i = 180 \text{ nF}$; $L_i = 350 \mu\text{H}$.

For dual sensors with two electrically isolated circuits, which are classified into type groups BD, LD or ND the parameters U_i and I_i apply to each sensor circuit and parameter P_i to the combined circuits. The values for C_i and L_i must be doubled.

Tables 5 to 8 list the temperature class, respectively the maximum surface temperature in relation to maximum ambient temperature, EPL and values of circuit parameters I_i and P_i .
