whereby an output signal is provided proportional to the position of the positioning element. The rugged sensors are wear and tear-free, thanks to the contactless operating principle. They convince through their excellent repeatability, resolution and linearity within a broad temperature range. The innovative technology ensures a high immunity to electromagnetic DC and AC fields.

Mounting instructions

Mounting instructions/Description

Extensive mounting accessories provide various options for installation. The measuring principle of RLC coupling makes the sensor immune to magnetized metal splinters and other interference fields.

LED indications

- green
positioning element is in the measuring range
- yellow
positioning element is in the measuring range, the distance is too large. This is indicated by a weaker signal
- yellow flashing
positioning element is outside the coverage.
- off
positioning element is outside the programmed area (only with teachable versions)

Teaching

In addition to the setting via IO-link or -PACTware, the start and end point of the measuring range can be set by pressing the button at the teachadapter. Moreover there is the possibility to invert the course of the output curve.

Bridge pin 5 and pin 1 for 10 s = factory setting

Bridge pin 5 and pin 3 for 10 s = factory setting inverted

Bridge pin 5 and pin 3 for 2 s = sets start value of measuring range

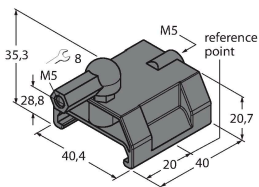

Bridge pin 5 and pin 1 for 2 s = sets end value of measuring range
