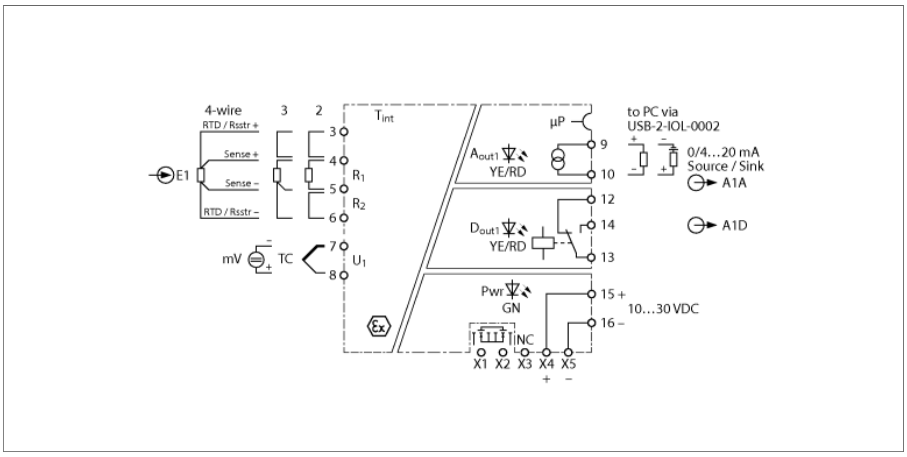
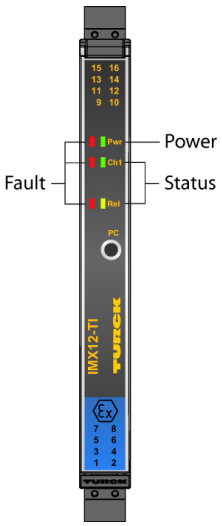
IMX12-TI02-1TCURTDR-1I1R-CPR/24VDC/CC





The 1-channel temperature measuring amplifier IMX12-TI02-1TCURTDR-1I1R-CPR/24VDC/CC has inputs for: Thermocouples acc. to IEC 60584, DIN 43710, GOST R 8.585-2001, low voltages (-150 … +150 mV), RTDs acc. to IEC 60751, DIN 43760, GOST 6651-94 (2, 3 and 4-wire) and resistors 0…5 kΩ (2, 3 and 4-wire). The device can be powered from a power bridge that also transmits a collective fault signal.

The cold junction compensation can be set to internal, external, or to a constant value. The device is configured via the PC interface. The current outputs can be set to 0/4 … 20 mA and as source or sink. The unit features an additional invertible complementary contact relay output that facilitates the monitoring of set limits for exceedance/shortfall and monitoring using a window function.

A green LED indicates operational readiness. A fault in the input circuit leads to a flashing red LED according to NE44, an internal error to a steady red LED. The fault current can be adjusted to < 3.5 mA or > 21.5 mA.

The device can be used in safety circuits up to SIL2 (high and low demand according to IEC 61508) and meets the requirements of NE21. It is equipped with removable spring type terminals.

The device can be used in safety circuits up to SIL 2 (high and low demand according to IEC 61508) (hardware fault tolerance HFT = 0).

The device is equipped with removable spring-type terminals.
